PROFESSIONAL SUMMARY

Broadcast and live-production specialist with 5+ years leading live esports and tournament broadcasts end to end. Skilled in multi-source production with vMix and OBS, large-scale stream ingestion over RTMP/SRT, and building stable low-latency streaming infrastructure on Linux VPS servers. Combine hands-on production leadership with a Computer Science background in data processing, systems configuration, and real-time dashboards. Proven at coordinating production crews and delivering reliable multi-platform broadcasts under pressure.

CORE SKILLS

Broadcasting & Live Production: vMix, OBS, multi-source switching, broadcast equipment, network monitoring
Streaming & Delivery: RTMP/SRT, VDO.Ninja, SRS/streaming servers, low-latency optimization, multi-platform delivery
Infrastructure: Linux, VPS (Contabo), cloud & server management, Docker, uptime/reliability
Data & Systems: Python, gaming API data processing, real-time dashboards, MS SQL
Programming & Web: C#, JavaScript, ASP.NET Core, REST APIs, Next.js
Coordination: Production team & caster coordination, stakeholder communication, live technical support

PROFESSIONAL EXPERIENCE

Broadcast & Streaming Operations Lead

Mar 2025 – Present

GOAT Esports

- Lead end-to-end live broadcasts for major esports tournaments (e.g., PMNC South Asia, PMNC Bangladesh).
- Manage large-scale stream ingestion of 50+ concurrent player feeds over RTMP/SRT pipelines.
- Operate and optimize vMix and OBS for multi-source, low-latency live production.
- Design and maintain high-stability streaming infrastructure on Linux VPS servers.
- Collect, process, and structure gaming API data into real-time broadcast dashboards.
- Coordinate production crews and casters to ensure stable multi-platform delivery.

Live Broadcast & League Operations

Mar 2020 – Feb 2025

WarCities

- Directed live broadcasts for major regional tournaments over five years.
- Configured vMix Pro and OBS for complex multi-source productions.
- Managed tournament scheduling, sponsorship promotions, and technical event workflows.
- Delivered real-time technical support and troubleshooting for participating teams.
- Coordinated production crews and casters for seamless multi-platform delivery.

Software Developer Intern

Sep 2025 – Nov 2025

F10 Solutions

- Implemented and integrated software modules for the Accounts Department using ASP.NET MVC and .NET Core API.
- Built and connected front-end components with Next.js and managed MS SQL data workflows.
- Contributed to real-world application workflows and system optimization.

FREELANCE STREAMING & SERVER INFRASTRUCTURE

- Designed and managed live streaming pipelines using RTMP, SRT, and VDO.Ninja.
- Deployed and maintained services on Contabo VPS servers with 30–50+ live feeds.
- Integrated streaming workflows with OBS and vMix, optimizing for low-latency stability.

KEY PROJECTS

GOAT Esports — Tournament Broadcasting System

- Built streaming infrastructure handling 62 concurrent players using an SRS server with RTMP/SRT ingest.
- Delivered a dual-dashboard system with role-based access control and real-time feed monitoring.

GOAT Live — Android Live Streaming Application

- Delivered a production-grade Android RTMP/SRT streaming app for competitive esports tournaments.
- Integrated AES-256-GCM encrypted credential storage with a bcrypt-authenticated Node.js backend.

EDUCATION

Bachelor of Computer Science and Engineering (CSE)

Nov 2021 – Dec 2025

Hamdard University Bangladesh

CGPA 3.66 | Thesis: A Spatio-Temporal Model for Deepfake Detection Using CNN and Stacked Bi-LSTM Networks

Higher Secondary Certificate (HSC), Science

Jun 2018 – Jun 2020

Dhaka City College

GPA 5.00

RESEARCH & PUBLICATION

A Spatio-Temporal Model for Deepfake Detection Using CNN and Stacked Bi-LSTM Networks

2026

IEEE 2nd Int. Conference on Quantum Photonics, AI, and Networking (QPAIN), 2026

- Co-authored research on deepfake video detection using a hybrid VGG16 + Bi-LSTM architecture.
- Achieved 95.67% accuracy and 0.9925 AUC under a strict evaluation protocol.
- Proposed pair-aware dataset splitting to prevent data leakage.
